Can I Wear My Band During an MRI, X-ray, or Medical Procedure?

Inas B. - 2026-11-15 - Health, Safety & Support

Some medical equipment and procedures use strong electromagnetic fields or other forms of energy that may affect electronic devices.

For your safety, follow these precautions:

MRI scans

Remove your Vitalist Health Band before an MRI scan.

Do not wear the band inside an MRI room or during an MRI procedure.

X-rays, CT scans, and surgery

Remove the band before an X-ray, CT scan, or surgery unless your healthcare provider specifically tells you otherwise.

If you are unsure whether you should wear it during a procedure, ask the healthcare team responsible for your care.

Security scanners and industrial equipment

Strong electromagnetic fields, including those produced by some industrial equipment and security systems, may affect the band.

Follow instructions from the staff responsible for the equipment and any relevant safety procedures.

Hospitals and airplanes

Follow the hospital's or airline's rules about electronic and wireless devices. Staff may ask you to switch off or remove the band.

If you remove your band, keep it somewhere safe and dry. You can put it back on when it is appropriate to do so.

For questions about the device, contact Vitalist Support at **support@vitalist.ca**.
